

The World

By: Rowen S.

Chapter 1: Knowing

It was a normal day like all the other days. I brushed my teeth and got dressed, I went to work. Everything was normal. Except today. Tuesday January 19 at 8 am I found something terrible down in the lab. I called out to someone just in case, "Dr. James??" "Hello Dr. Sandra." "Hi," I said back. "What is the problem?" Dr. James asked. "Look," I said. I showed him what I found in the air. "This can't be good," he said. "I never thought something this bad could happen."

Chapter 2: Disasters

We were right about all of this! The deserts are freezing and the Arctic is melting. Canada has major earthquakes and landslides. In the oceans we are experiencing tsunamis with waves 220 feet tall, plus hurricanes that are massive. California is covered in wildfires. There's more, but all of this happened because what I found in the air. I detected Iridium, cobalt and zirconium mixing in the air which is very dangerous. It will kill everyone and everything and maybe even the planet! I need to tell someone before it's too late. Maybe the President. I dialed the Office of the President. "Dr. Sandra why are you calling me so late?" "I am missing out on my beauty sleep--this better be important Dr. Sandra." "Mr. President please listen!" "We have an emergency!" "What?" "We are all going to die!" said the President with real panic in his voice. "No we are not," I replied. "Please tell people, PLEASE!" "Good Night Dr. Sandra, it is late," said the President. "Ughhh, he never listens!" I hung up the phone.

Next day around 3pm. "I would like to declare that we are totally safe." announced the President. "No, we are not safe." "Get Dr. Sandra off!, she is on the air!" shouted the President. "No Mr. President, this is very important." "I found iridium, cobalt and zirconium mixing in the air." This is very deadly but no one panic!" "I have an idea!" The President interrupts, "What can a woman do about this?" "Well if you listen, you will find out." "I am thinking that I can build Nano-bots to clean what is in the air."

Chapter 3: The End

10...9...8...7...6...5...4...3...2...1...BLAST OFF! Finally we are in space, I look at the earth and it is dying! Hopefully I can do this, I think. The next day, the Nano-bots got to work and clean the atmosphere. The natural disasters began to come to an end and we were able to save lots of animals and people, but if you lost anyone "may God be with you."

The End
