

Adventures of YouTube Scientists

By Rhyan B. and Zoe P.

My name is Aya. I live in Egypt and I am 12 years old. My favorite subject is math, but my most favorite is science. Here in Egypt we have to study like crazy, but I have no problem with that because I will spend all day after school doing experiments from my text books. My mom thinks I should get outside more often, but there is no time for that, I like doing experiments in the house. I enjoy studying things like bird feathers or maybe other things like mold! Speaking of mold I think I might go outside to see if there is some on my old tree house. My mom will stop me if she sees me. But, I didn't find anything. I looked for bird feathers too. I didn't find any. I went inside and ate super. We had my favorite Samak makli. That is meats and beans. When I finished I went upstairs to get ready for bed.

The next day I had breakfast and went to school. I got to my favorite class SCIENCE! Today the worst thing happened, we did an experiment it was baking soda and vinegar! I couldn't wait. I did my project before Mr. Johns asked and my EXPLODED and it fell all over my homework. The good news was that I got the paper for the science contest. I was so excited. But I didn't have an idea. Then "Ding" I should make SLIME that's the trend now but do people know how it becomes slime? That's a good Hypothesis. I got home and I look up how to make slime and

why it becomes slime. What I needed was glue and borax. I went down stairs to get the borax. My mom had the solution ready because she was washing clothes. I got a bowl and spoon and quickly ran up-stairs. I got the glue out of my backpack and tried to make the slime. When I was done making the slime I grabbed the borax and I ran down stairs and I tripped let go of the borax and it spilled everywhere I also tipped over the vase by the stairs and it shattered and cut me. My mom ran down stairs and yelled what is this mess she made me clean the borax and I got grounded for a week. Guess what she said I couldn't do anymore science experiments. There goes my future.

The next day at school my friend Cleo asked me if we could be partners. It took me a long time to say yes or no. I said yes because I was thinking maybe I can do it at her house. First I asked my mom she said yes. I told her about the slime and we did that for are science project. I stayed at her house for 2hrs typing and printing. We finished the project but we just needed to get a poster. We went to her mom's office in her house and got one. We glued everything on to the poster.

The next day was Friday I brought my slime to go with the presentation. It was finally our turn, we were excited and nervous at the same time. We finished and we got our grade, it was a A+. I posted our process for making SLIME and we made a video on YouTube. It was amazing I got up the next day and it had 1 million views. Fans were sending comments and

messages. I showed my mom my grade she was happy and mad at me because she doesn't like social media. But I was too happy to care!

And that's how I became a YouTube Scientist.

The End
