Rosealex's Hard Work

One day, Rosealex was playing soccer at school. She really wants to be on the prime soccer team in the city. The conflict is she only has ten dollars and the uniform for the prime team costs 300 dollars. She starts to sell stuff at school like candy, squishies, and slime. That doesn't work that well. She only makes ten dollars. Rosealex puts all the money she has right now in her savings account. Then she tries to sell lemonade outside her front yard. The lemonade works better. She earns forty more dollars. With that money she puts it in her savings account. Now she has sixty dollars. Rosealex tries mowing lawns and cleaning houses. It works way better. She makes 80 more dollars, so now she has 140 dollars. She now tries helping at the Fall Fest. Guess how much money she makes? She made 100 more dollars so she now has 240 dollars in her savings account. She washes puppies and makes thirty more dollars. Now she has 270 dollars. Now she makes her neighbor a beautiful garden. Now she has precisely 300 dollars which is enough for the uniforms. Rosealex has been waiting for this very moment. She takes her money out of the bank, tries out for the team, and Rosealex made the team. They had a big jubilee. They went to buy the uniform. All her effort paid off. She'll never forget this moment.
